

PRESS RELEASE | 08 MAY 2024

Siren Biotechnology and Catalent Enter Partnership for Manufacturing of AAV Gene Therapies for Cancer

SAN FRANCISCO, CA, [May 08, 2024] (GLOBE NEWSWIRE) -- Siren Biotechnology, pioneers of Universal AAV Immuno-Gene Therapy for Cancer, and Catalent Inc., the leader in enabling the development and supply of better treatments for patients worldwide, entered a strategic partnership to support the development and manufacturing of Siren Biotechnology's AAV immuno-gene therapies.

Under the partnership, Catalent will provide process development and cGMP manufacturing of Siren Biotechnology's adeno-associated viral (AAV) vector-based therapeutic candidates for use in clinical trials. Catalent will further support process optimization at its process and clinical development center in Baltimore, MD.

"We look forward to working with Catalent, a leading CDMO with premier capabilities in AAV vector development and manufacturing, on the development of our AAV Immuno-Gene Therapies," said Dr. Nicole Paulk, CEO, Founder, and President of Siren Biotechnology. "This partnership demonstrates our commitment to a robust manufacturing process that will move our therapeutic programs into the clinic as quickly as possible. Catalent is the only CDMO in the U.S. that has received FDA approval for AAV-based gene therapies to date, and this was a significant factor in our decision to partner with Catalent as we plan for future commercialization of our upcoming clinical drug products."

David McErlane, Group President of Biologics at Catalent stated, "Catalent is committed to partnering early in the development process with innovative companies like Siren. We are excited to work together to pioneer a pathway for the development and commercial manufacturing of safe, high-quality AAV gene therapies to provide life-saving treatments to patients with cancer."

About Siren Biotechnology

Headquartered in San Francisco, CA, Siren Biotechnology is sounding the alarm against cancer. We are the pioneers of Universal AAV Immuno-Gene Therapy, which combines the promise of two transformative therapeutic technologies, AAV gene therapy and cytokine immunotherapy, into a single modality which we believe will redefine how we destroy tumor cells and elicit anti-tumor immunity. Our vision is for Universal AAV Immuno-Gene Therapy to become the standard of care for any solid tumor cancer.
